

NO-SPILL®

How to find your Date Stamp

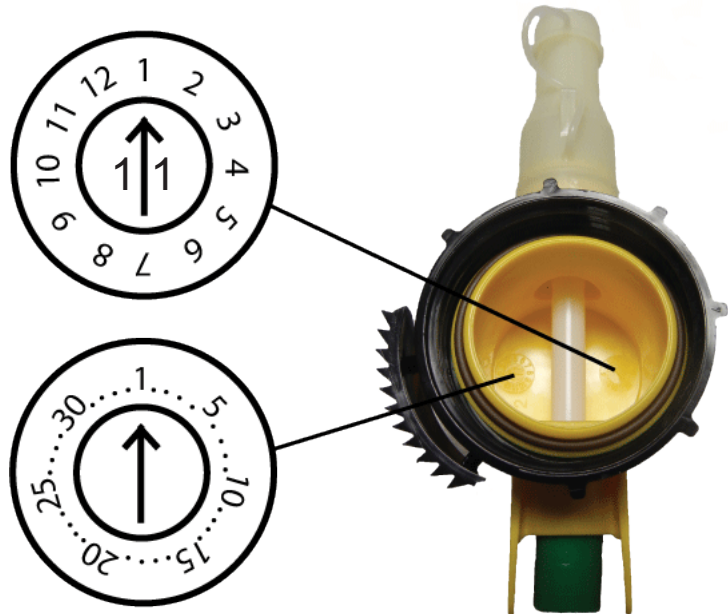

In December of 2011, No-Spill LLC will be enforcing the 3 year warranty established under new ownership. It is vital for customers to be aware of the date stamp should warranty issues arise.

When a warranty submission is requested on our website, the date stamp of either the nozzle assembly or can will be requested. Proof of purchase is also acceptable.

See our diagram to the right to easily locate the date stamp on your nozzle assembly. The arrow in the top circle indicates the production month. The arrow in the bottom circle indicates the production day. The two digits on either side of the arrow in the bottom circle indicates the last two digits of the production year.

You will also see similar circles on the bottom of your can. They will usually be close in date, but not identical to the date of the original nozzle sold on the can.

PLEASE NOTE: If your can or nozzle does not have this date stamp then it predates the 3 year warranty. We strongly encourage you to purchase a new version of our nozzle to benefit from the many improvements and new features.

6131 Nozzle Assembly, required on cans older than 2009
